

The background image shows a person wearing a dark hoodie, seen from behind, sitting at a desk in a server room. There are several computer monitors on the desk, displaying various data and code. The room is dimly lit with blue and green light from the screens and server racks in the background. In the top left corner, there is a white line-art graphic of a network or star pattern.

Phishing Awareness Training

by Jeeva Ranjini

what is PHISHING ?

Phishing is a type of cyber attack where attackers trick people into sharing confidential information such as passwords, bank details, OTPs, or personal data.

usually done via:

- Emails
- SMS (Smishing)
- Phone calls (Vishing)
- Fake websites

why Phishing is Dangerous ?..

- Identify theft
- Financial loss
- Data breaches
- Malware infection
- Company reputation damage

📌 Over 90% of cyberattacks start with phishing.

HOW TO RECOGNIZE PHISHING EMAILS AND FAKE WEBSITES

Recognizing Phishing Emails

Phishing emails are designed to trick users into acting quickly. Look for these warning signs:

Common Red Flags

- Unknown or suspicious sender address
(example: support@bank-secure123.com)
- Urgent or threatening messages
(“Your account will be blocked immediately”)
- Spelling and grammar mistakes
- Generic greetings
(“Dear User” instead of your name)
- Suspicious links or attachments
- Requests for sensitive information
(passwords, OTPs, card details)

Tip:

 Legitimate organizations never ask for passwords or OTPs via email.

Recognizing Fake Websites

Fake websites look real but are created to steal your information.

- ▶ Warning Signs of Fake Websites
 - Misspelled or fake URLs
(paypal.com instead of paypal.com)
 - No HTTPS or padlock icon
 - Poor design or broken links
 - Unexpected login pages
 - Pop-ups asking for personal details

📌 Tip:

👉 Always check the URL carefully before entering any information

Safe Practices

- Hover over links before clicking
- Type official website addresses manually
- Use updated browsers and security tools
-  Enable Two-Factor Authentication (2FA)

🌐 Real Fake Website Examples

● Example : Fake Banking Website

URL: [www.sbi-secure-login\[.\]com](http://www.sbi-secure-login[.]com)

Looks like official bank website

Login form steals username & password

🚩 Red Flags:

Extra words in URL

No official domain

Fake HTTPS icon

📱 Other Common Phishing Types

● SMS Phishing (Smishing)

“Your package is on hold. Click to track delivery.”

● Phone Call Phishing (Vishing)

“This is bank support. Please share your OTP.”

SOCIAL ENGINEERING TACTICS USED BY ATTACKERS

Attackers manipulate human emotions, not systems.

 Common Tactics:

- Fear (“Your account is hacked”)
- Urgency (“Immediate action required”)
- Trust (posing as bank, HR, admin)
- Curiosity (“See who viewed your profile”)
- Authority (“Message from IT Support”)

Tips:

🎯 Why It Works:

- People act quickly without verifying
- Emotional pressure reduces logical thinking

🛡️ Prevention Tip:

Pause, verify the source, and never share passwords or OTPs.

🖼️ Picture suggestion:

➡ Collage showing fake bank email, urgent alert, fake IT support, and prize scam

Best Practices to Avoid Phishing Attacks

- Think before you click – don't act on urgency or fear
- Verify the sender – check email addresses and phone numbers
- Hover over links before clicking to check the real URL
- Never share passwords, PINs, or OTPs
- Check website URLs carefully (look for correct spelling & HTTPS)
- Use strong, unique passwords for different accounts
- Enable Two-Factor Authentication (2FA)
- Avoid downloading unknown attachments
- Keep software and browsers updated
- Report suspicious emails or messages immediately

Best Practices to Avoid Phishing

Do's

- Verify sender email address
- Use strong, unique passwords
- Enable Two-Factor Authentication (2FA)
- Keep software updated

Don'ts

- **Don't click suspicious links**
- **Don't download unknown attachments**
- **Don't share OTPs or passwords**

Real-World Phishing Example

Email Example

Subject: Unusual Login Attempt

Fake bank logo

Link redirects to fake login page

Steals username & password

 **Thousands of users fall for this daily.**

Quiz Time!
